Re: Pricing on seed mix

The following seed mix is mix #37751, last purchased in 2002.

| SPECIES | VARIETY | PLS LBS/ACRE |
|-------------------------|--------------------------|--------------|
| Intermediate wheatgrass | Oahe | 1.5 |
| Pubescent wheatgrass | Luna | 3.0 |
| Western wheatgrass | VNS (variety not stated) | 0.75 |
| Indian ricegrass | Nczpar | 2.25 |
| Bluebunch wheatgrass | Secar | 1.5 |
| Antelope bitterbrush | VNS | 0.75 |
| Four-wing saltbush | High Elevation 4X | 1.5 |
| Bird's foot trefoil | Norcen | 0.75 |
| Mountain Big sagebrush | VNS | 1.5 |
| Rubber rabbitbrush | VNS | 1.5 |
| TOTAL | | 15.0 |

Price for the above mix is now \$11.75/pls lb. At the rate of 15 lbs/acro, the price is \$176.25. If Bird's foot trefoil were taken out, the price would increase to \$12.23/lb. However, the total lbs would decrease to 14.25 lbs/ac, or \$174.27/ac. I would recommend removing the Bird's foot from the mix due to the low annual precipitation for this area, which is below that required for Bird's foot to survive.

With Regards,
